PROFESSIONAL SUMMARY

Computer Science Engineering graduate (B.Tech, 2025) with hands-on expertise in **Core Java**, **Spring Boot**, and **RESTful API** development. Proficient in **OOP**, **Collections Framework**, **Exception Handling**, and **SQL/MySQL** with a strong grasp of **SDLC**, **Agile** methodologies, and **Git/GitHub** workflows. Skilled at building secure, scalable, and maintainable backend applications while applying analytical problem-solving to real-world challenges. Demonstrated ability to integrate **machine learning** for cybersecurity and develop dynamic front-end interfaces with **React.js**.

EDUCATION

Santhiram Engineering College

B.Tech in Computer Science Engineering; CGPA: 7.11/10.0

2021–2025

Nandyal, India

SKILLS SUMMARY

Languages: Java, Python, JavaScript, SQL

Frameworks & Libraries: Spring Boot, Spring Data JPA, Hibernate, React.js, Tailwind CSS, Django

Databases: MySQL, MongoDB

Developer Tools: Git, GitHub, Maven, Postman, IntelliJ IDEA, VS Code, REST APIs, JDBC

Core Concepts: OOP, Collections Framework, Exception Handling, SDLC, Agile Methodologies, Feature Engineering

PROJECTS

Cloud Security Threat Detection using ML | *Python, Django, Scikit-learn, XGBoost, LightGBM, MySQL*

- Engineered a machine-learning web application to detect insider threats and privilege escalation by analyzing user activity logs.
- Processed the CERT Insider Threat dataset through aggregation, feature extraction, and normalization.
- Implemented and compared Random Forest, AdaBoost, XGBoost, and LightGBM; achieved **97% detection accuracy** with LightGBM.
- Utilized Django ORM for data persistence and built a secure UI for real-time log monitoring.

E-Commerce Web Application | *React.js, JavaScript, HTML, CSS, Tailwind CSS*

- Developed a fully responsive e-commerce platform with product browsing, category filtering, detailed views, and cart management.
- Engineered reusable React components with state management to ensure a smooth, scalable user experience.
- Designed a mobile-first, clean UI using Tailwind CSS for a seamless shopping experience.

Console-Based Order Management System | *Java, OOP, Collections Framework, Exception Handling*

- Built a robust order-management system supporting **three concurrent payment methods** (UPI, Card, COD) using core OOP principles.
- Minimized runtime failures by implementing structured exception handling to gracefully manage invalid inputs and edge cases.

ACHIEVEMENTS

- Achieved **97% detection accuracy** for insider-threat classification using **LightGBM** ensemble learning on the CERT dataset.
- Engineered a scalable order-management system supporting **3 concurrent payment methods** (UPI, Card, COD) with zero runtime failures across all test cases.
- Built a fully responsive e-commerce web application with **reusable React components**, ensuring seamless performance across devices.
- Secured a **GPA of 9.8/10** in SSC, demonstrating strong academic consistency and analytical ability.
